INTRO

Full-Stack Software Engineer and technical lead with a passion for tackling complex architectural challenges and engineering software solutions. Proficient in developing with modern tech tools including Next.js, React.js, Node.js, Typescript, and Tailwind CSS, coupled with robust database management using Supabase.

PROFESSIONAL EXPERIENCE

Development Intern | *Towson University CGIS* | Baltimore, MD 10/2025 - 05/2026

- Contributed to the development of the [TU Interactive Campus Map](#), a high-traffic geospatial application used by 20,000+ students, faculty, and campus visitors for navigation and asset location.
- Refactored 4,000+ lines of legacy CSS for the MDOT MTA inspection application, deconstructing a monolithic globals.css into modular, feature-specific files to drastically improve developer code readability.
- Collaborated in an Agile team environment, utilizing Jira for issue tracking and sprint planning, and managed CI/CD pipelines and git version control using Bitbucket to streamline Agile development sprints.

Development Intern | *Mission Media* | Baltimore, MD 06/2025 - 08/2025

- Led the development of a fully dynamic landing page with integrated user engagement tracking in collaboration delivering data-driven insights to Towson University's Arts, Culture & Entertainment marketing campaign.
- Migrated data for [NASA's Home & City website](#) from Drupal to Wordpress, optimizing the CMS infrastructure to enable highly efficient content management.

Technical Lead | *Infinite Group Inc.* | Baltimore, MD 08/2023 - Present

- Directed technology planning and strategic organizational initiatives as a Board Member, aligning IT infrastructure with the 501(c)(3) nonprofit's long-term goals.
- Integrated Stripe payment processing, eliminating financial risk exposure and securing donations and event registrations for 100+ participants.
- Developed a centralized event management dashboard that reduced administrative overhead by 40% by replacing manual spreadsheets, scaling operations to support 100+ active players and participants for sports events.
- Architected a centralized database system using Supabase to support a multi-app ecosystem, seamlessly synchronizing dashboard operations with real-time league leaderboards, game statistics, and player data across different platforms.

PROJECT EXPERIENCE

Infinite Score - *Next.js, TypeScript, React, Supabase, Node.js, REST API, Web Sockets, Google Antigravity*

- Engineered a comprehensive basketball management platform to centralize scheduling, live scoring, post-game summaries and league-wide statistical tracking for 80+ basketball players across 8 teams.
- Automated live production workflows by building a WebSocket data pipeline, instantly pushing on-court scoring events to a broadcast video overlay and eliminating live broadcast manual data entry.
- Replaced legacy paper tracking workflow with a digital dashboard, reducing manual data entry errors and streamlining post-game statistical reporting.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, C++, HTML, CSS, SQL

Frameworks: React, Next.js, Node.js, Express.js, Astro

Databases: PostgreSQL, MySQL, MongoDB, WordPress

EDUCATION

Towson University | Baltimore, MD

05/2026

Major: Computer Science | *GPA:* 3.6 | *Honors:* Dean's list
